

Learning Management System

The Learning Management System (LMS) is a digital platform used to create, share, manage, and monitor educational content. These systems enable educational institutions and businesses to manage their distance learning processes from a single center.

The primary purpose of an LMS is to make the learning process more accessible and measurable. It tracks participant progress, manages exams and assignments, and provides reporting. In short, by moving the learning process to a digital environment, it creates significant advantages in terms of both time and cost.

By integrating digital pedagogical tools, the Learning Management System aligns with SDG 12 through measurable reductions in paper consumption, energy expenditure, waste generation, and logistical resource usage. Beyond environmental gains, it cultivates a sustainable campus culture where responsible consumption becomes an embedded institutional practice. In this way, LMS strengthens OSTİM Technical University's commitment to environmentally conscious, efficient, and innovative higher education.
